## Display Members During Voting By Name or By Keypad ID Version 108

For version 106, the Deliberator allows the operator to select the way the members are displayed on the Display View screen during voting.

To change the display order, from the top menu, select File | Setup to open the setup dialogue box.

Check the appropriate box under Vote List Sort Order.

Check "Live Votes" if you wish to show the individual votes as they are cast. Uncheck to hide votes until "Tally" is clicked. In both cases, the vote totals are shown only when "Tally" is clicked.
